Orthopaedic oncology is a specialized field of medicine that focuses on the diagnosis, management, and reconstruction of musculoskeletal tumors. These tumors can be either benign (non-cancerous) or malignant (cancerous), and they can occur in any part of the body. Orthopaedic oncologists are specially trained to treat these tumors, and they work closely with other specialists, such as medical oncologists, radiation oncologists, and pathologists, to provide the best possible care for their patients.

This comprehensive textbook provides a state-of-the-art overview of the diagnosis, management, and reconstruction of complex musculoskeletal tumors and other bone and soft tissue sarcomas. The book is divided into

seven sections, each of which covers a different aspect of orthopaedic oncology.

Section 1: General Principles

This section provides an overview of the general principles of orthopaedic oncology, including the diagnosis, staging, and treatment of musculoskeletal tumors. It also discusses the role of the orthopaedic oncologist in the multidisciplinary team.

Section 2: Benign Musculoskeletal Tumors

This section covers the diagnosis, management, and reconstruction of benign musculoskeletal tumors. It discusses the different types of benign tumors, their treatment options, and the potential complications of treatment.

Section 3: Malignant Musculoskeletal Tumors

This section covers the diagnosis, management, and reconstruction of malignant musculoskeletal tumors. It discusses the different types of malignant tumors, their treatment options, and the potential complications of treatment.

Section 4: Complex Reconstruction

This section covers the complex reconstruction of musculoskeletal tumors. It discusses the different types of reconstruction techniques, the indications for reconstruction, and the potential complications of reconstruction.

Section 5: Patient Care

This section covers the patient care aspects of orthopaedic oncology. It discusses the psychosocial aspects of cancer care, the role of the orthopaedic oncologist in the palliative care team, and the long-term follow-up of patients with musculoskeletal tumors.

Section 6: Future Directions

This section discusses the future directions of orthopaedic oncology. It discusses the new technologies and treatments that are being developed, and the challenges that the field will face in the years to come.

This comprehensive textbook provides a state-of-the-art overview of the diagnosis, management, and reconstruction of complex musculoskeletal tumors and other bone and soft tissue sarcomas. It is an essential resource for orthopaedic oncologists, other specialists who care for patients with musculoskeletal tumors, and anyone who is interested in this field of medicine.

About the Authors
